

AUTHORS: GET YOUR WORK NOTICED

ASME's quick guide to promoting your research articles to the engineering community

The American Society of Mechanical Engineers (ASME) publishes some of the most prestigious engineering journal content in the world.

We are sharing these tips for **getting your published work noticed** and promoting your scientific endeavor. Used strategically, they can help **empower you and advance your career path**.

1

ENHANCE YOUR ARTICLE

Search Engine Optimization (SEO)

SEO helps your article appear closer to the top of search engine results.

Here are a few tips:

- Be consistent with your name across publications
- Use keywords in the title, abstract and section headings
- Include image alt text with descriptive keywords

Enrich Your Content

Add **multimedia**, like video, podcasts or animation, and include **supplemental data** to increase reader engagement and promote understanding of your work. Note that articles with short titles are cited more often.

Share Your Article

- Share news about your article via **social media** and **discovery services** (Facebook, Twitter, LinkedIn profile, Instagram and Tik Tok)
- Inform your peers and colleagues via **email** and include a link in your **email signature**
- Refer to your article's **Digital Object Identifier (DOI)**
- Consider the option of paying an Article Publication Charge (APC) to publish your article as **Open Access** for future submissions so that your work is accessible to all readers upon publication
- Submit the pre-publication version to your **institutional repository** or a **subject-specific repository**
- Reach out to **newsletters, blogs** and **listservs** that inform your community

Raise Your Personal Profile

- **Participate in Scholarly Collaboration Networks (SCNs)** where you can share, collate and make recommendations
- Create **your own personal website** and/or make sure to keep your profile up-to-date on **your institution's or corporation's site**
- Present your work to your peers at **conferences and meetings** as a speaker, poster presenter or via scanned QR code
- Register for an **ORCID ID**, which clearly distinguishes you from other researchers with similar names
- Add a reference to your paper on appropriate **Wikipedia** pages

Tap Into Publicity Channels

- Let your institution's **public or alumni relations** department know that you have published a newsworthy article; they may promote by issuing a press release or news brief
- Discuss other options your institution or corporation may have in place

Note: When your article is published make sure your publisher includes your work in any automatic notifications and alerts to their followers.

MEASURE YOUR SUCCESS

Track Your Article's Performance

Periodically check **citation counts** aggregated by Google Scholar, Web of Science or Scopus.

Track and Promote Your Personal Achievement

Find and track your **h-index** (using Web of Science, Scopus, or Google Scholar), an author-level metric that measures both the productivity and citation impact of your publications and promote it to your peers and broader community.

Google Scholar Metrics is another tool to help you gauge the impact of your articles.
